Photo #1 (Above left) — Gas-fired condensing mode high efficiency boilers, manufactured by Munchkin, 400 mbh.

Photo #2 (Left) — High efficiency radiators used through building, including Sanctuary, manufactured by Buderus.

Photo #3 (Right) — In-direct fired stainless steel domestic hot water tank, Super-Stor.
Photo #4 (Above left) — View of Sanctuary, recently painted. A next step is to install light-weight interior storm windows throughout the facility, able to installed and removed annually by congregants.

Photo #5 (Left) — The Church of St. John the Evangelist is just down Beacon Hill from the Massachusetts State House.

Photo #6 (Above right) — Part of energy efficiency is achieved by zoning the facility, with spaces heated only when used. These are circulation pumps serving 5 zones, with new distribution piping fully insulated.
